Those described in records AAY82830 Y82835 are derived from Drown Cartine and Cartine Company of the Cartine Cart
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          associated antigens are presentable to the immune system by HLA-A2 molecules and are generally between 8 to 10 amino acids in length. The amino acids located at positions 2 and 9 of the tumnour associated antigens are the anchor residual which participate in the binding to MHC class I molecules, more specifically HLA-A2. More tumnur associated associated and only us are described in TRNESEY recents ANYBERBE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            prostate specific membrane antigen (PSMA). Those described in receids YY82836 AMY82839 are derived from prostate acid phosphotase (PAP). Those described in records AMY82840 Y82846 are derived trom lar-tacherin (BA-46). Those described in records AMY82847-Y82884 are derived from Mucin and those described in records AMY8281-Y82884
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Those tumour associated antigens described in records AAY82805-Y82824
                                                                                                                                                                                                         Tumor associated antigen peptides, especially derived from uroplakin,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

```
Lactadherin protein was found in exosomes produced by dendritic cells. The protein is involved in the phagocytosis of particulate antiques by dendritic cells. Exosomes produced by dendritic aclis appead to tumour antiques induce potent inhumer responses. Lactadherin or variants of it may be used in the mediation of an immune response. Variants of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Chimeric isolated (human) lactadherin polypeptide that functions as an adaptor of cross-priming to eliminate pathogenic antiqens, e.g. in
                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                            component of the apical surface of the normal breast epithelial cell, was obtained by PCK and RATE methods. CDNA clones can be used to prepare MAbs for use in immunotherapy, immunohistopathology, prognosis, diagnosis, diagnosis, diagnosis, diagnosis, used to prospect or (glycosylated) in cakaryotic cells.
               used in assays to determine the presence of a cancerous tumour of
epithelial origin, and in a vaccine against neoplastic tumours

AAH32943 to AAH77195 and AAG73514 to AAG77788 represent human colon cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antiques. The colon cancer antiques have myseastive as colon cancer antiques. The colon cancer antiques have myseastive as colon cancer antiques. The colon cancer antiques the myseastive in the prevention, of diagnosis and treatment of discase associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's sense that a freet the activity of P by expression in a patient's or F supplement the patient's of P by expression of D by inspection the may be used to produce the colon concert associated is, by inspecting the colon concert associated is, and P can be used in the presenting the colon of the expression of the expression of the presenting the colon colon canditreatment of colonectal carcinomes and cancers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic acids encoding 4277 human colon cancer-associated polypeptides, useful for proventing, diagnosing and/or treating colorectal cancers -
lactadherin may be used for inhibition and/or stimulation of the cross-prining of antigers and stimulation of the phagographs is of antigens by dendritic cells. Compositions derived from lactadherin can also be used to monitor an immune response, more specifically a CTL (Sytokalis 7 implacyte) response and also to produce tills specific for a selected antigen. The present sequence is the human lactadherin protein.

                                                                                  The secreted proteins and their genes are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Fathological conditions can be diagnosed by determining the amount of the new protein in a Sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 21 penes, based on the tissues in which they are most highly expressed, and include
                                                                                                                                                                                                                                             disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, ALDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies,
                AAD05220-AAD05282 represent cDNAs corresponding to 21 human secreted protein genes, and AAE01352 AAE01413 represent the proteins they encode. AAE01415-AAE01433 represent human secreted protein fragments or variants.
                                                                                                                                                                                                                                                                                                        cognitive disorders (e.g., Alzheimer's disease, Parkinson's disease), cognitive disorders, schizophrenia, asthma, skin disorders (e.g., pour ais), seepsis, diabetes, atheroscheroshs, cardiovascular disorders, andioquenic disorders, kidney disorders, gastrointestinal disorders, prequancy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunbarn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to requenerate tissues, to identify their cognate ligands or binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. Antibodies specific for a provious of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g.,

The present invention describes developmentally-requiated endothelial cell locus 1 (bel-1). The protein has epidormal growth factor (BGF) like domains and discoidin 1/factor VIII-like domains. The bel-1 proteins
                                                                                                                                                                                                                                                                                                                             integrin, and is an apoptosis inducer. The prosent sequence represents a sequence given in the sequence listing but not mentioned further within the specification.
                                                                                                                                                                           have an inhibitory effect on angiogenesis (blood wessel growth), this activity may be useful clinically to prevent necroscolarisation of tissues such as tumour nodules and prevention of metastases. The anti-
                                                                                                                                                                                                                            anglequaic activity of Del-1 may be used to treat abnormal conditions that result from angloquesis, including another, dishbitic retinopally, theumatoid arthritis and endometriosis, Since Del-1 promotes anglogenesis it can be used to treat cardiac ischaemia, thrombotic
                                                                                                                                                                                                                                                                                              stroke, wound healing and peripheral vascular disease, Del-1 is also useful to: promoting bone formation. Del-1 binds to alpha V beta 3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 o,

    useful for treatment of cancer,

                                                              diabetic retinopathy, rheumatoid arthritis and endometriosis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                  ζ
                                                                                                                                                                                                            Lactadherin protein was found in exosomes produced by dendritic cells. The protein is Involved in the phagocytosis of particulate antigens by dendritic cells. Exosomes produced by dendritic cells exposed to tumour antigens induce potent immune responses. Lactadherin or variants of it may be used in the mediation of an immune tesponse. Variants of lactadherin may be used to inhibition and/or stimulation of the resonance of antigens by dendritic cells. Compositions derived from lactadherin can also be used to monitor an immune response, more specifically a CIL cytoloxic T-lymphocyte) response and also to produce CILs specific for a selected antigen. The present sequence is the mouse

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ŝ
```

```
measuring human gene expression in a sample derived from buman heart (see NBA21535-ABA41835). The present sequence is a protein encoded by one such frish. The probes may be used for prodefithy measuring and direlating gene expression in samples derived from the human heart via microarrays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               By measuring grading, staging, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heatt and vascular system e.g. cardiovascular disease. by recession, cardiar arthythmics and conquisted human fiscase. Note: The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from WIPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Protein #6199 encoded by probe for measuring heart cell gene expression.
                liver. The single exon nucleic acid probes may be used for predicting, measuring and dispigating gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Single each carb to acid packs the analyzing processing to Arran

They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimmer's disease, multiple scierosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                                                finman brain expressed single exemptobe encoded protein SEQ ID No: 32212.

```
probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as symphoma, lenkaemia and myelomia. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Peptide #6135 encoded by probe for measuring cervical gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Probe; human; microarray; gene expression; cervical epithelial cell;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0
                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to human single exon nucleic acid probes (SEME) see AAII0568 AAI28459). The present seperate is a peptide consided by one such probe. The SEMPs are derived from human HeLa cells. The SEMPs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   can be used to produce a single exon microaliay, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Note. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/pub]ished_pot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Peptide #6986 emoded by probe for measuring placental gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                              Human genome derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ·,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  70 4%; Score 3%; DB 22; Length 22; 71.4%; Pred No 5.3;

The present invention relates to single exon nucleic acid probes (SENF, see AAI3135-AAI57546), The present sequence is a peptide encoded by one such probe. The probes are useful for for probability of properties a minrearray for predicting, measuring and displaying sere expression in semples derived from human players. The probes are useful for anti-matal diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell octlinteractions -

                          The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell cell interactions in higher newlaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIGITA-ARLAGATI), expressed tNA
                                                                                                                                                               The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from Wibg at Itp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to isolated lung tumour specific proteins and their corresponding cDNA molecules. Lung tumour-specific proteins and their antique-presenting cells are useful for stimulating and/or expanding T cells specific for a tumour protein, and for inhibiting the development of cancer. The invention also relates to a composition useful for stimulating an immune response, and for treating cancer. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; lung tumour protein, immunostimulant, cytostatic; gene therapy; antisense-therapy, vaccine, immune response; lung cancer, SCC2-29.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Reed SG, Lodes MJ, Mohamath R, Secrist H, Benson DR, Indilias CY;
